**DETAILED ACTION**

***Drawings***

1. The drawings were received on 10/4/02. These drawings are acceptable.

***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9, and 16-17, are rejected under 35 U.S.C. 102(b) as being anticipated by

Applicant's Admitted Prior Art (AAPA).

2. With regards to claim 1, AAPA teaches a mobile computing system comprising of:
  - a personal computer (PC) system [fig 1];
  - a personal digital assistant (PDA) system [fig 2] that interfaces to the PC system [page 3 lines 13-20];
  - a PC chassis [page 3, lines 21-24];
  - and a PDA chassis housing the PDA system [fig 2]; wherein the PC chassis houses the PC system and the PDA chassis, whereby the PDA chassis may be removed from the PC chassis,
  - disconnecting interface of the PDA system [fig 2 element 220] to the PC system, and providing an independent PDA system [figs 1, 2, page 3, lines 3-24].
3. With regards to claim 2, AAPA teaches the mobile computing system of claim 1 wherein the PDA system is comprised of:
  - a display [fig 2, element 205];
  - a battery [fig 2, page 3 lines 3-12];
  - a memory [fig 2, page 3 lines 3-12]; and
  - an input device [fig 2, elements 205, 210].

Art Unit: 2182

4. With regards to claim 3, AAPA teaches the mobile computing system of claim 2 further comprising: an antenna for wireless communications [fig 2, element 215, page 3 lines 3-12].
5. With regards to claims 4, 5, and 6, AAPA teaches wherein the PC chassis further comprises one or more expansion bays [fig 1, elements 110, 115], wherein the PDA chassis is placed in one of the bays [page 2 lines 16-21, page 3, lines 13-22].
6. With regards to claims 7, 8, and 9, AAPA teaches wherein the PDA chassis is placed in the interior of the PC chassis [fig 1, elements 110, 115, page 2 lines 16-21, page 3, lines 13-22].
7. With regards to claims 16, AAPA teaches the mobile computing system of claim 1 further comprising: a common display shared by the PC system and the PDA system, and a common set of input output devices shared by the PC system and the PDA system [page 3, lines 13-22].
8. With regards to claim 17, AAPA teaches a method of integrating a removable PDA system [fig 2] with a PC system [fig 1] comprised of:
  - connecting the PDA system to the PC system by a separable interface [page 3 lines 3-24]; and
  - isolating control to either PDA system or PC system when instructed by a user or a predetermined system logic [page 3, lines 13-22].

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 10-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (AAPA) in view of US Patent No. 5,768,163 to Smith, II.

Art Unit: 2182

9. With regards to claims 10-15, AAPA fails to teach wherein the PDA chassis is placed on the exterior of the PC chassis, and on the top of the PC chassis.

However, Smith teaches the use of a connector for connecting a PDA with a PC chassis [figs 1-7, 10, column 1 line 40 to column 2 line 34] for the benefit increasing the ease of sharing of information between devices.

It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the teachings of both AAPA and Smith to provide the PDA chassis is able to be placed on both the exterior and on top of the PC chassis for the benefit of increasing the ease of sharing of information between devices.
